What We Will Cover

we’re finishing this after our dry run and inevitable cuts

What is a Fractal String

Definition 1

A **fractal string** Ω is a bounded open subset of the real line.

What is a Fractal String

Definition 1

A **fractal string** Ω is a bounded open subset of the real line.

$$\Omega = \bigcup_{j=1}^{\infty} \ell_j, \qquad \mathcal{L} = \mathrm{Vol}_1(\Omega) = \sum_{j=1}^{\infty} \ell_j \implies \lim_{j\to\infty} \ell_j = 0.$$

What is a Fractal String

Definition 1

A **fractal string** Ω is a bounded open subset of the real line.

$$\Omega = \bigcup_{j=1}^{\infty} \ell_j, \qquad \mathcal{L} = \mathrm{Vol}_1(\Omega) = \sum_{j=1}^{\infty} \ell_j \implies \lim_{j\to\infty} \ell_j = 0.$$

$$\ell_1 \geq \ell_2 \geq \ell_3 \geq \cdots \geq 0$$

What is a Fractal String

Definition 1

A **fractal string** Ω is a bounded open subset of the real line.

$$\Omega = \bigcup_{j=1}^{\infty} \ell_j, \qquad \mathcal{L} = \mathrm{Vol}_1(\Omega) = \sum_{j=1}^{\infty} \ell_j \implies \lim_{j\to\infty} \ell_j = 0.$$

$$\ell_1 \geq \ell_2 \geq \ell_3 \geq \cdots \geq 0$$

The fractal string we studied the most in particular is the **Cantor String**

Cantor String

Inner-Tubular Neighborhood

Definition 2

Inner-tubular neighborhood: $V(\epsilon) = \mathrm{vol}_1\{x \in \Omega \mid d(x, \partial\Omega) < \epsilon\}$

Inner-Tubular Neighborhood

Definition 2

Inner-tubular neighborhood: $V(\epsilon) = \mathrm{vol}_1\{x \in \Omega \mid d(x, \partial\Omega) < \epsilon\}$

Counting function: $N_\Omega(x) = \sum_{\ell_j \geq x} 1$

More Notation: $\mathcal{W}_\Omega(x) = \sum_{j:\ell_j < x} \ell_j$

Now we can write: $V(\epsilon) = 2\epsilon \cdot N_\Omega(2\epsilon) + \mathcal{W}_\Omega(2\epsilon)$

Cantor String Volume

Inner Minkowski Dimension of a Fractal String

Definition 3

Dimension of Ω: $D_\Omega = \inf\left\{\alpha \geq 0 \mid V(\epsilon) = O\left(\epsilon^{1-\alpha}\right) \text{ as } \epsilon \to 0^+\right\}$

Inner Minkowski Dimension of a Fractal String

Definition 3

Dimension of Ω: $D_\Omega = \inf\left\{\alpha \geq 0 \mid V(\epsilon) = O\left(\epsilon^{1-\alpha}\right) \text{ as } \epsilon \to 0^+\right\}$

In other terms: $D_\Omega =$ the smallest α st $\lim_{\epsilon \to 0^+} \frac{V(\epsilon)}{\epsilon^{1-\alpha}} = c, \; c \in \mathbb{R}$

Inner Minkowski Dimension of a Fractal String

Definition 3

Dimension of Ω: $D_\Omega = \inf\left\{\alpha \geq 0 \mid V(\epsilon) = O\left(\epsilon^{1-\alpha}\right) \text{ as } \epsilon \to 0^+\right\}$

In other terms: $D_\Omega =$ the smallest α st $\lim\limits_{\epsilon \to 0^+} \dfrac{V(\epsilon)}{\epsilon^{1-\alpha}} = c,\ c \in \mathbb{R}$

Cantor String Dimension: $D_{cs} = \log_3 2$

Fractal lawn

Because a fractal string is a bounded open subset of $\mathbb{R}$, the Cartesian product of two fractal strings is a bounded open subset of $\mathbb{R}^2$.

Fractal lawn

Because a fractal string is a bounded open subset of $\mathbb{R}$, the Cartesian product of two fractal strings is a bounded open subset of $\mathbb{R}^2$.

Definition 4

A **fractal lawn** $\mathcal{L}^2$ is a bounded open subset $\Omega = \{(x, y) : x \in \Omega_1$ and $y \in \Omega_2\}$ of $\mathbb{R}^2$.

Fractal lawn

Because a fractal string is a bounded open subset of $\mathbb{R}$, the Cartesian product of two fractal strings is a bounded open subset of $\mathbb{R}^2$.

Definition 4

A **fractal lawn** $\mathcal{L}^2$ is a bounded open subset $\Omega = \{(x, y) : x \in \Omega_1$ and $y \in \Omega_2\}$ of $\mathbb{R}^2$.

$$\Omega_1 = \bigcup_{j=1}^{\infty} \ell_j,\ \Omega_2 = \bigcup_{i=1}^{\infty} l_i$$
$$\ell_1 \geq \ell_2 \geq \ell_3 \geq \cdots \geq 0,\ l_1 \geq l_2 \geq l_3 \geq \cdots \geq 0$$

Cantor lawn

Dimension of fractal lawn

Inner-tubular neighborhood: $V(\epsilon) = \mathrm{vol}_2\{x \in \Omega \mid d(x, \partial\Omega) < \epsilon\}$

Counting functions: $N_{\Omega_1}(x) = \sum_{\ell_j^{-1} \leq x}$, $N_{\Omega_2}(x) = \sum_{l_j^{-1} \leq x}$
